PROFESSIONAL SUMMARY

Full Stack Developer with 2+ years of hands-on experience designing and delivering scalable web applications using the MERN stack (MongoDB, Express.js, React.js, Node.js). Proven track record building production-ready REST APIs, real-time data pipelines, AI-powered platforms, and automated workflow systems. Experienced with cloud infrastructure (AWS S3), payment gateway integration (Stripe, Razorpay), queue-based background processing (BullMQ), and role-based access control (RBAC). Strong collaborator in agile/scrum teams with a focus on clean, maintainable code, performance optimization, and exceptional user experience.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, Python, Java, HTML5, CSS3, React.js, Next.js, Node.js, Express.js, Redux, FastAPI, Tailwind CSS

Databases: MongoDB, MySQL, PostgreSQL, Microsoft SQL Server

Cloud & DevOps: AWS (S3), REST API design, BullMQ, Server-Sent Events (SSE), WebSockets

Tools & Integrations: Git, GitHub, JWT, OAuth 2.0, Stripe, Razorpay, OpenAI API, ReactFlow, Google reCAPTCHA, SMTP, Agora, Akool

Methodologies: Agile, Scrum, REST API development, Microservices, RBAC, MVC architecture

PROFESSIONAL EXPERIENCE

Full Stack Developer Aug 2025 – Present

Ishvara Tech Consulting LLP | Bhubaneswar, Odisha, India

- Architected and maintained scalable REST APIs for a social media automation platform (LinkedIn & Twitter), implementing content publishing, post scheduling, and campaign analytics with robust error handling, retry logic, and structured logging — achieving high-reliability production deployment.
- Engineered a high-throughput background processing system using BullMQ with fault-tolerant worker processes, enabling efficient queue management and task automation pipelines capable of handling large-scale asynchronous workloads.
- Led development of Coachmaster, an AI-powered course generation SaaS platform, implementing Role-Based Access Control (RBAC) for granular multi-tenant permissions across Employee, User, HR, and Admin roles.
- Delivered real-time communication features using Server-Sent Events (SSE) across Node.js and React, enabling live data streaming and dynamic content updates with lower overhead than WebSocket connections.

Associate Software Developer Jun 2024 – Jul 2025

Affinate | Remote

- Built a visual workflow management platform (Stepboard) using Next.js and ReactFlow, developing custom drag-and-drop nodes, auto-resize algorithms, and dynamic board management features for end-to-end work tracking.
- Implemented a full-featured mentor-student abroad counseling platform (Been There Done That) with meeting scheduling, slot management, and dual payment gateway integration using Stripe and Razorpay for seamless session booking.
- Optimized frontend state management using Redux, reducing page load times and improving overall application performance and user experience.
- Developed a reusable UI component library, cutting feature development time by approximately 30% and improving codebase consistency across the product.

PROJECTS

Coachmaster | *React.js, Node.js, Express.js, MongoDB, Redux, AWS S3, Stripe, OpenAI, SSE, RBAC, Tailwind CSS* [Live](#)

- Built a full-stack AI-powered coaching and e-learning platform with course management, AI chat assistant, and real-time avatar-based streaming sessions using Akool and Agora.

- Implemented secure authentication with JWT, OAuth 2.0, email verification, password reset, and role-based access control (RBAC) with role-specific dashboards and onboarding workflows.
- Integrated OpenAI, AWS S3 (signed URLs, file uploads), Stripe billing, SMTP email, Google reCAPTCHA, video streaming, and automated certificate generation into a unified platform.

Social Campaigns Automation | *Node.js, Express.js, BullMQ, REST APIs*

- Designed and built scalable REST APIs for a social campaign automation platform supporting LinkedIn and Twitter/X workflows including auto-posting, contact discovery, auto-connect requests, and automated messaging campaigns.
- Implemented queue-based asynchronous processing and job scheduling systems to efficiently manage high-volume campaign tasks such as bulk messaging, connection requests, and automated workflow execution.
- Engineered reusable and interconnected campaign API modules enabling seamless end-to-end workflow automation — from contact discovery through auto-connect to automated messaging — for lead generation and marketing operations.
- Built LinkedIn group scraping and member automation features including data extraction, member engagement workflows, and automated group participation functionalities.

EDUCATION

Full Stack Web Development Oct 2023 – Aug 2024

Masai School | Bengaluru, Karnataka, India

Bachelor of Technology, Computer Science Aug 2022 – May 2023

Jaipur National University | Jaipur, Rajasthan, India
